

## BR & BD 65/80 W

### Versatile Scrubber Driers with Interchangeable Heads.

KÄRCHER's BR and BD 65/80 W offer a high level of versatility to the walk-behind scrubber drier market. Featuring KÄRCHER's new interchangeable brush head system, the machines offer the end user the opportunity to purchase one machine and two heads, ensuring the right cleaning head for the job without the need to buy a new machine. The machines feature a 65cm roller head (BR 65/80 W) or a 65cm disc head (BD 65/80 W) as standard, with the option of purchasing 65cm or 75cm wide roller or disc heads as retrofit parts. Head replacement only takes a couple of minutes and does not require tools. A range of brushes and pads are available for each head and can be changed quickly without the need for tools.

- DOSE system for exact metering of detergents and rapid change of detergent type without the need for tank cleaning, saving time and cost.
- FACT variable brush rotation speed (roller head models only) optimising brush speed for different floor types and reducing noise in sensitive environments.
- Simple controls including paddle drive lever, LCD display with single navigation button for easy operator training.
- Fresh water filter to reduce maintenance and ensure perfect performance.
- Drain tap for simple and safe waste water disposal and tank cleaning.
- Innovative water and detergent distribution rail to ensure constant output and easy maintenance.
- Pre-sweep device on roller heads means coarse dirt does not need to be removed before scrubbing.
