

Single motor brush-type vacuum cleaner - CV 30-1

Powerful cleaning with brushes

New for 2004

The first Kärcher upright model to use a single motor to drive both the suction fan and brush.

The efficient vacuum cleans right down to the base of carpets, and restores the pile. This new design incorporates a belt driven roller brush that features automatic cut out if, for example, a piece of cloth or long carpet fringes are accidentally sucked in. This clever system prevents the drive belt from being damaged in the event of a blockage. The brush can be adjusted manually to suit different carpet weights and will pick up fluff and hairs as well as coarse dirt.
