

Industrial surface cleaning accessory - FR 30

Cleans hard surfaces and reclaims water when used in conjunction with a commercial wet & dry vacuum.

Connecting to the industrial ranges of both pressure washers and wet & dry vacuum cleaners, the FR 30 is an ideal accessory for any floor cleaning task. By connecting to any industrial high pressure cleaner the FR 30 becomes a rotary floor cleaning tool. Using the power of the water to rotate a set of blades inside the unit, the FR 30 spins into action with a floating effect caused by the upward force from the blades. The high pressure jets then blast the floor surface clean with no splashback. Once this stage of cleaning is finished, the FR 30 can be connected to a Kärcher wet & dry vacuum, reclaiming all the dirty water and leaving a perfectly clean floor.
