

PD400 SPRAY UNIT

The PD400 canister sprayer is a fully mobile unit requiring only an air supply to be fully operational. The 20L tank is mounted on an all stainless steel trolley fitted with 7" nylon wheels (rubber tyres available for outdoor use). The canister is filled with pre-diluted solution and connected to an industrial air supply. All units are fitted with an air regulator and gauge enabling adjustment between 0-85 psi, and a pressure relief valve prevents this limit being exceeded. A 5m chemically resistant hose, control valve, lance and nozzle are fitted as standard, however a variety of poly, brass and stainless fittings are readily available. Spray Systems are dedicated to developing new products and ideas, so if your requirements are unique, we have the ability to custom design a sprayer to meet your exacting standards for any application.

Specification

Vessel Capacity:	20 litres
Air Supply Required:	Pressure 3 to 6 bar (40 to 85 psi) Flow 10 m ³ /h (150 l/min)
Air Inlet Connection:	1/4" hosetail on female quick connect

Applications

- Fabric Protectors
- Sanitisers
- Janitorial Chemicals
- Lubricants
- Disinfectants
- Release Agents

This unit is inspected and tested at manufacture and every unit is supplied with an individual serial number and pressure test certificate.
