

Specification

- Robust construction
- Adjustable chute direction up to 190°
- 13,0 HP OHV 4-Stroke Engine
- Manual start (220v back up)
- 15" Chevron wheels provide great grip on the snow
- 5 Forwards and 2 Reverse gears for different work rates
- 71cm working width to easily fit through gateways and down paths
- 32cm working height of the turbines for easy breakup of deep snow.
- 10 - 15m snow projection gives accurate placement of material (conditions allowing)
- Headlight
- Simple ergonomic controls by the handlebars enable easy operation
- 120kg weight makes loading into a van or trailer simple
- Warranty:
Consumer 2 years
Professional 90days

SnowBoss SB1370W

The SB1370W boasts new controls and other refinements that make it a top choice for snow clearing.

SnowBoss Snow Blowers

The SnowBoss SB1370W is a powerful 2 stage snow blower. The first stage uses a 71cm wide front auger with ice teeth to cut in to the snow and break it up whilst transferring the material to a centre position. A turbine is at the centre position. This is the second stage. The turbine ejects the snow vertically up an exit chute. The chute is fully adjustable 190° to direct the snow where you want it.

In perfect conditions these machines can blow snow several metres.

The front auger housing is adjustable for height on 2 skids.

The specially adapted 13hp single cylinder overhead valve engine is designed to operate in low temperature conditions and runs on unleaded petrol. A single tank full of fuel should provide over 1 hours operation.

The powerful, easy starting engine not only operates the front auger and turbine but also provides the power for the comprehensive transmission system. The SnowBoss SB1370W blower boasts a 7 speed transmission system with 5 forwards and 2 reverse positions which are fully controllable from the operators position allowing an optimum speed whatever the conditions. 15" tyres with an aggressive snow pattern together with a locked axle drive ensure the maximum possible traction.

The machine features an overall working width of 78cm for easy access to pathways and from the front of the auger housing to the tip of the handlebars is 140cm. The typical working weight of this machine is 120kg.

The "wrong type of snow" can affect the way the snow blower deals with the material.

Larger volumes of cold, light, loose, powdery snow are just what the machines like. Re-frozen, watery, sludge is more difficult and can be aided with the special clearing tool that is mounted conveniently on the machine.

The SnowBoss SB1370W is now covered by 2 years manufacturers warranty for domestic/consumer purposes and 90 days in professional applications.
