

# Twintec Cable TTQ3035S

There are many applications where small, highly congested areas must be cleaned regularly and where there is little or no chance of turning a machine. You need to go into a corridor or aisle forwards and come out backwards, it's the only way to do the job.

For these types of application our compact cylinder cleaner provides the optimum operational efficiency and, by virtue of the integrated front end dual suction nozzles, it achieves effective cleaning and water pick up wall to wall... other designs just will not do this! Many smaller machines, however, just do not have adequate capacity to satisfy the floor area in many of these applications on a single tank capacity.

Take the retail sector for example, convenience stores are becoming more and more popular and getting bigger and bigger, even in the Service Stations. To satisfy these somewhat larger areas we have added a new model to the range, with a full 30-litre capacity, yet based on our super compact 350mm cylinder chassis.

Also available in 115V/120V specification.

Simple to Use Operator Handle

Easy Tank-Filling Access

Large Wheels

Simple Brush Access

Easy Drain System

The TT-3035 has been developed on our tried and tested mains-operation design; providing easy operation, high performance and 100% reliability.

Brush Motor	Vac Motor	Power	Working Width	Speed	Capacity	Range	Weight	Size
400W	1000W	230V AC 50Hz	350mm	50Hz = 1000rpm 60Hz = 1200rpm	30L	42m	38Kgs	750 x 740 x 480mm
