Stainless Steel Wet & Dry

The wet or dry 750's provide a superb standard with the extensive use of austenitic grade stainless steel in the container, lower chassis and tube sets.

With these machines you have a choice of performance, Simplex one motored or Duplex two motored Structofoam power heads. There are two chassis options - a tipper and non-tipper fixed design, large transit wheels and all models are equipped for wet or dry use.

Kit BB-8

Kit BB-8

The accessory kit is in every way to the same high specification as the machine itself with long, double swivel hoses; stainless steel tube sets and Structofoam wet and dry nozzles.

For high profile and high specification wet or dry machines there just could not be a higher standard.

Kit BB-8
