

NuSpeed *NRL1500*

When it comes to large areas of floor maintenance or restoration there is no substitute for both size and weight.

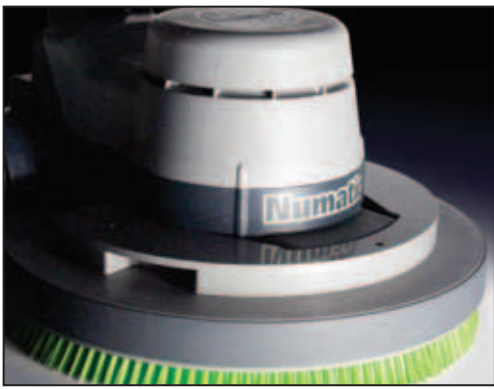

The NRL uses a range of 550mm brushes or 500mm floor pads and is supplied as standard in a 40kg specification, fitted with the Automatic Torque Control System - designed to give constant performance under even the most arduous conditions.

In the standard 150rpm specification the NRL is a genuine 'workhorse' which, by virtue of its size, weight and drive system, will exhibit excellent handling characteristics in the majority of applications.

The Nuspeed series is now equipped as standard with performance enhancing "A.T.C", Automatic Torque Control. A unique system that monitors operation and boosts torque, as required, to provide consistent performance under varying load conditions.

The 'snap-on' 10kg standard weight can be easily removed, and replaced as required to suit various applications.

Fast and user friendly like never before.

10Kg Weight

Cable Secure

Extra-Large Brush

Heavy-Duty Gearbox

NRL1500
